

UPGRADING TO SHAREPOINT 2010 REQUIRES A DETAILED ROADMAP FOR SUCCESS

SharePoint Server 2010 brings a mountain of new capabilities to the platform, but with those new capabilities come a load of new complexities. How will you plan to move your existing environment into the new environment without overly complicating your installation or configuration? Should you start with a fresh environment and migrate the content or would an in place upgrade be the most time and cost effective? The upgrade experience is greatly improved, but without the proper planning you will still face many challenges and depending on the complexity of your installation these challenges can be quite complicated. The Summit 7 Systems team will define and systematically reduce that complexity and will work with you to define your migration plans. We will use our years of experience to guide you through the best practices, planning decision points, third party migration solutions and pre-upgrade tools to help you successfully conquer your upgrade challenges.

Key Components for a SharePoint 2010 Upgrade can include:

- Identifying content for upgrade or migration
- Evaluation of physical hardware needs
- Configuring Service Applications appropriately
- Identifying Third Party tools to assist with the Migration

Helping You Effectively Execute Your Upgrade and Migration Plan

When looking for a partner to help your organization continue down the path to a SharePoint 2010 Upgrade, Summit 7 Systems has the experience to make your project successful. We understand the obstacles and pitfalls that cause issues with an upgrade and how to best avoid these. An effective plan for upgrades will contain the proper planning for upgrading any custom developed solutions including branding and third party components and also contain a post upgrade review and testing procedure to ensure that your system is performing at optimum levels.

Effective Upgrades and Migrations will:

- ▲ Minimize the impact on the end user
- ▲ Ensure content is migrated and easily located
- ▲ Plan for and upgrade customizations
- ▲ Modify the information architecture and governance plans when necessary
- ▲ Optimize performance

Summit 7 Systems is a team of mentors, guides, and experts that empower you to overcome any barrier between your business and success. We are a Microsoft Gold Certified Partner specializing in the Microsoft Business Productivity infrastructure. Summit 7 Systems designs systems that streamline collaboration, simplify data management, leverage social computing and optimize user experience. So, bring us your mountain and let us conquer it together.
